周昭宇老師之著作目錄

Last updated 2022/08

01. Control chart pattern recognition using spectral clustering technique and support vector machine under gamma distribution.
Computers & Industrial Engineering, https://doi.org/10.1016/j.cie.2022.108437, 2022 (SCI).

02. Monitoring the coefficient of variation using a double-sampling control chart.
Communications in Statistics – Simulation and Computation,
https://doi.org/10.1080/03610918.2021.1971242, 2021 (SCI).

03. The integrated quality control model with product inspection and process improvement.
Quality Technology and Quantitative Management, 17(6): 646-660, 2020 (SCI).

04. The integrated study for process improvement with economic specification limits, process means setting and quality investment: an extension of the model in Abdul-Kader et al. (2010).
Quality Technology and Quantitative Management, 17(6): 627-645, 2020 (SCI).

05. Process quality improvement based on the application of rectifying sampling inspection plan.
Journal of Industrial and Production Engineering, 36(4): 205-211, 2019 (TSSCI).

06. Economic design of product and process parameters under the specified process capability value.
Quality Technology and Quantitative Management, 15(6): 686-701, 2018 (SCI).

07. The joint determination of specification limits, process mean, and economic manufacturing quantity.
Journal of Industrial and Production Engineering, 34(4): 283-288, 2017 (TSSCI).

08. Optimum process mean, standard deviation and specification limits settings under the Burr distribution.
Engineering Computations, 34(1): 66-76, 2017 (SCI).

09. Robustness of the EWMA median control chart to non-normality.
International Journal of Industrial and Systems Engineering, 25(1): 35-58, 2017 (EI).

10. Simultaneous determination of manufacturer's process mean and production run length and retailer's order quantity.
Journal of Management Analytics, 3(1): 59-79, 2016 (ESCI).

11. Joint determination of process quality level and production run time for imperfect production process.
Journal of Industrial and Production Engineering, 32(4): 219-224, 2015 (TSSCI).

12. Modified economic production and raw material model with quality loss for conforming product.
Journal of Industrial and Production Engineering, 32(3): 196-203, 2015 (TSSCI).

13. Economic order quantity, process quality level, warranty period and production run length settings. *Arabian Journal for Science and Engineering*, 40(2): 627-632 2015 (SCI).

14. Production quantity and specification limits settings by considering specified process capability value. *Journal of Industrial and Production Engineering*, 31(4): 229-237, 2014 (TSSCI).

15. Economic specification limits and process mean setting by considering unequal target value and specification center.
Journal of Industrial and Production Engineering, 31(4): 199-205, 2014 (TSSCI).

16. Economic design of variable sampling intervals $\bar{X}$ charts with B&L switching rule.
International Journal of Industrial and Systems Engineering, 15(4): 490-505, 2013 (EI).

17. Optimum process mean setting based on variable sampling plan with specified consumer's risk.
Journal of Industrial and Production Engineering, 30(8): 473-479, 2013 (TSSCI).

18. Fuzzy optimum design of Dodge-Romig sampling rectifying inspection plan under quality investment.
Journal of Industrial and Production Engineering, 30(5): 296-302, 2013 (TSSCI).

19. Optimum settings of process mean, economic order quantity and commission fee.
Journal of Applied Science and Engineering, 15(4): 343-352, 2012 (EI).

20. Economic design of autoregressive moving average control chart using genetic algorithms.
Expert Systems with Applications, 39(2): 1793-1798, 2012 (SCI).

21. An empirical study on the determination of price, warranty length and production rate in the dynamic sales market.
International Journal of Industrial and Systems Engineering, 12(4): 449-469, 2012 (EI).

22. Optimal determination of purchaser's order quantity and producer's process mean.
Journal of Applied Science and Engineering, 15(1): 41-48, 2012 (EI).

23. On the asymptotic confidence intervals of multiple-stream yield index S_{pk}^{M}.
Communications in Statistics ─ Theory and Methods, 40(22): 3948-3958, 2011 (SCI).

24. Robustness of the EWMA and the combined $\bar{X}$-EWMA control charts with variable sampling intervals to non-normality.
Journal of Applied Statistics, 38(3): 553-570, 2011 (SCI).

25. Optimal price, warranty length and production rate for free replacement policy in the static demand market.
Omega ─ International Journal of Management Science, 37(1): 29-39, 2009 (SSCI).

26. Economic design of variable sampling intervals $\bar{X}$ charts with A&L switching rule using genetic algorithms.
Expert Systems with Applications, 36(2, part 2): 3048-3055, 2009 (SCI).

27. Yield measure for the process with multiple streams.
Quality & Quantity, 43(4): 661-668, 2009 (SSCI).

28. A real-time inventory decision system using Western Electric run rules and ARMA control chart.
Expert Systems with Applications, 35(3): 755-761, 2008 (SCI).

29. The variable sampling rate $\bar{X}$ control charts for monitoring autocorrelated processes.
Quality and Reliability Engineering International, 24(7): 855-870, 2008 (SCI).

30. Economic design of variable sampling intervals EWMA charts with sampling at fixed times using genetic algorithms.
Expert Systems with Applications, 34(1): 419-426, 2008 (SCI).

31. Optimal burn-in time and warranty length under fully renewing combination free replacement and pro-rata warranty.
Reliability Engineering & System Safety, 92(7): 914-920, 2007 (SCI).

32. Non-normality and the variable parameters $\bar{X}$ control charts.
European Journal of Operational Research, 176(1): 361-373, 2007 (SCI).

33. Determination of sizing conditions for E-class glass fibre yarn using Taguchi parameter design.
Materials Science and Technology, 23(6): 683-687, 2007 (SCI).

34. On the bootstrap confidence intervals of the capability index C_{pk} for multiple process streams.
Engineering Computations, 24(5): 473-485, 2007 (SCI).

35. Joint economic design of variable sampling intervals $\bar{X}$ and *R* charts using genetic algorithms.
Communications in Statistics ─ Simulation and Computation, 35(4): 1027-1043, 2006 (SCI).

36. Determination of price and warranty length for a normal lifetime distributed product.
International Journal of Production Economics, 102(1): 95-107, 2006 (SCI).

37. Economic design of EWMA charts with variable sampling intervals.
Quality & Quantity, 40(6): 879-896, 2006 (SSCI).

38. Determination of nattokinase production condition using Taguchi parameter design.
Food Science and Technology International, 12(3): 215-220, 2006 (SCI).

39. On the bootstrap confidence intervals of the process incapability index C_{pp}.
Reliability Engineering & System Safety, 91(4): 452-459, 2006 (SCI).

40. Optimization of nattokinase production condition using response surface methodology.
Journal of Food Process Engineering, 29(1): 22-35, 2006 (SCI).

41. Economic design of variable sampling intervals T^2 control charts using genetic algorithms.
Expert Systems with Applications, 30(2): 233-242, 2006 (SCI).

42. Application of bivariate parameter design to the optimization of the operating conditions of a turning process.
International Journal of Production Research, 43(24): 5229-5240, 2005 (SCI).

43. Adaptive $\bar{X}$ control charts with sampling at fixed times.
Quality and Reliability Engineering International, 21(2): 163-175, 2005 (SCI).

44. Acceptance control charts for non-normal data.
Journal of Applied Statistics, 32(1): 25-36, 2005 (SCI).

45. Robustness of the variable sample size and control limit $\bar{X}$ chart to non-normality.
Communications in Statistics ─ Theory and Methods, 34(3): 721-743, 2005 (SCI).

46. Interval estimation for the smaller-the-better type of signal-to-noise ratio using bootstrap method.
Quality Engineering, 17(1): 151-163, 2005 (EI).

47. Determining the optimum process mean under a lognormal distribution.
Quality & Quantity, 39(1): 119-124, 2005 (SSCI).

48. Determining a one-sided optimum specification limit under the linear quality loss function.
Quality & Quantity, 39(1): 109-117, 2005 (SSCI).

49. On the design of variable sample size and sampling intervals $\bar{X}$ charts under non-normality.
International Journal of Production Economics, 96(2): 249-261, 2005 (SCI).

50. On the design of variable sampling intervals $\bar{X}$ charts under non-normality.
International Journal of Industrial Engineering ─ Theory, Applications and Practice, 12(3): 244-253, 2005 (SCI).

51. The modified Ferrell and Chhoker's model for the optimal inspection policy.
International Journal of Information and Management Sciences, 15(1): 91-97, 2004 (EI).

52. Minimum average total inspection of variable lot-size sampling plan for continuous production. *Journal of Applied Statistics*, 31(2): 183-189, 2004 (SCI).

53. An evaluative study on adaptive $\bar{X}$ control charts under various combinations of variable parameters. *Journal of Management*, 21(3): 375-389, 2004 (TSSCI).

54. Set the optimum process parameters based on asymmetric quality loss function. *Quality & Quantity*, 38(1): 75-79, 2004 (SSCI).

55. Effect of non-normality on the economic design of warning limit $\bar{X}$ charts. *Quality Engineering*, 16(4): 567-575, 2004 (EI).

56. The effect of correlation on the economic design of warning limit $\bar{X}$ charts. *International Journal of Advanced Manufacturing Technology*, 22(4): 306-312, 2003 (SCI).

57. Determining the optimum process mean under the bivariate quality characteristics. *International Journal of Advanced Manufacturing Technology*, 21(5): 313-316, 2003 (SCI).

58. Economic-statistical design of multivariate control charts for monitoring the mean vector and covariance matrix. *Journal of Loss Prevention in the Process Industries*, 16(1): 9-18, 2003 (SCI).

59. Economic design of CSP-1 plan under the dependent production process and linear inspection cost. *Quality Engineering*, 16(2): 239-243, 2003 (EI).

60. The optimum process parameters under the one-sided specification limit. *International Journal of Information and Management Sciences*, 14(3): 53-65, 2003 (EI).

61. Applying quality loss function in the design of economic specification limits for triangular distribution. *Asia Pacific Management Review*, 8(1): 1-12, 2003 (TSSCI).

62. Joint design of continuous sampling plans and specification limits. *International Journal of Advanced Manufacturing Technology*, 21(4): 235-237, 2003 (SCI).

63. Determining the optimum manufacturing target based on asymmetric quality loss function. *International Journal of Advanced Manufacturing Technology*, 21(3): 193-195, 2003 (SCI).

64. Determining the optimum process mean under a beta distribution. *Journal of the Chinese Institute of Industrial Engineers*, 20(1): 27-32, 2003 (TSSCI).

65. Economic specification limits under the inspection error. *Journal of the Chinese Institute of Industrial Engineers*, 20(1): 9-12, 2003 (TSSCI).

66. Tolerance design for a subsystem with unequal specification limits using Taguchi's quadratic loss function.
International Journal of Information and Management Sciences, 14(1): 31-36, 2003 (EI).

67. Economic design of continuous sampling plan under linear inspection cost.
Journal of Applied Statistics, 29(7): 1003-1009, 2002 (SCI).

68. A review and comparative study on adaptive $\bar{X}$ control charts.
Journal of the Chinese Statistical Association, 40(3): 361-390, 2002 (EconLit).

69. Minimum-loss design of $\bar{X}$ charts for correlated data.
Journal of Loss Prevention in the Process Industries, 15(6): 405-411, 2002 (SCI).

70. Determining the optimum process mean for a poor process.
International Journal of Advanced Manufacturing Technology, 20(10): 754-757, 2002 (SCI).

71. Determining the optimum process mean of a one-sided specification limit.
International Journal of Advanced Manufacturing Technology, 20(6): 439-441, 2002 (SCI).

72. Economic design of $\bar{X}$ charts for non-normally correlated data.
International Journal of Production Research, 39(9): 1931-1941, 2001 (SCI).

73. Economic design of Dodge-Romig LTPD single sampling plans for variables under Taguchi's quality loss function.
Total Quality Management, 12(1): 5-11, 2001 (SSCI).

74. Application of computer simulation to the design of a traffic signal timer.
Computers & Industrial Engineering, 39(1): 81-94, 2001 (SCI).

75. Minimum average fraction inspected for TCSP-1 plan.
Journal of Applied Statistics, 28(7): 793-799, 2001 (SCI).

76. Integrating an EMQ model and product quality.
Journal of the Chinese Institute of Engineers, 24(2): 269-272, 2001 (SCI).

77. Application of quality function deployment in improving teaching quality: a case study.
Journal of Education and Psychology, 24(1): 49-66, 2001 (TSSCI).

78. Target selection for an indirectly measurable quality characteristic in unbalanced tolerance design.
International Journal of Advanced Manufacturing Technology, 17(7): 516-522, 2001 (SCI).

79. On the present worth of multivariate quality loss.
International Journal of Production Economics, 70(3): 279-288, 2001 (SCI).

80. Design of a continuous sampling plan based on quadratic quality loss function.
Asia Pacific Management Review, 6(4): 485-489, 2001 (TSSCI).

81. Minimum-loss assembly tolerance allocation by considering product degradation and time value of money.
International Journal of Advanced Manufacturing Technology, 17(2): 139-146, 2001 (SCI).

82. Bivariate tolerance design for lock wheels by considering quality loss.
Quality and Reliability Engineering International, 16(2): 129-138, 2000 (SCI).

83. Economic-statistical design of $\overline{X}$ charts for non-normal data by considering quality loss.
Journal of Applied Statistics, 27(8): 939-951, 2000 (SCI).

84. Minimum average fraction inspected for CSP-C-1 plan.
Journal of Management, 17(4): 677-693, 2000 (TSSCI).

85. Design of a CSP-1 plan based on regret-balanced criterion.
Journal of Applied Statistics, 27(6): 697-701, 2000 (SCI).

86. A statistical approach for detecting tool breakage in end milling operations.
Journal of Industrial Technology, 15(3): 1-7, 1999 (EI).

87. Simulation study on the queuing system in a fast-food restaurant.
Journal of Restaurant & Foodservice Marketing, 3(2): 23-36, 1999.

88. Applying quality engineering technique to improve wastewater treatment.
Journal of Industrial Technology, 15(1): 1-7, 1999 (EI).

89. A comparative study on the estimators of standard deviation in statistical process control.
Journal of the Chinese Institute of Engineers, 22(1): 109-116, 1999 (SCI).

90. Application of Taguchi's parameter design in reducing the inventory cost of lot-size reorder-point model.
Journal of the Chinese Institute of Industrial Engineers, 15(4): 419-427, 1998 (TSSCI).

91. A proposed standard deviation chart for correlated data.
Journal of Management and Systems, 5(2): 247-264, 1998 (TSSCI).

92. Properties of the half-normal distribution and its application to quality control.
Journal of Industrial Technology, 14(3): 4-7, 1998 (EI).

93. Implementing the automated visual inspection in quality control system.
Journal of Industrial Technology, 14(1): 6-11, 1998 (EI).

94. Ranges control charts for non-normal data.
Journal of the Chinese Institute of Industrial Engineers, 14(4): 401-409, 1997 (TSSCI).

95. Expectation of the sample standard deviation.
Journal of Quality, 3(1): 45-64, 1996 (EI).

96. Application of the multi-stage validation procedure in simulating a queuing system.
Journal of Industrial Technology, 12(2): 26-29, 1996 (EI).
